PROFESSIONAL SUMMARY

Computer Science student and web developer who builds and maintains websites and web applications end to en]]]d clean HTML, CSS and JavaScript, design concepts converted into working interfaces, cross-browser debugging, and pages optimized for performance and responsiveness. Built a React dashboard on a live REST API and an interactive data visualization tool during a professional development internship. Independent, self-organized, and quick to pick up an unfamiliar part of the stack.

EDUCATION

Bachelor of Technology, Computer Science (Artificial Intelligence and Machine Learning)
Christ (Deemed to be) University | Expected May 2027

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React, responsive web design, mobile-first layout, cross-browser compatibility, UI implementation, frontend debugging
- **Backend and Database:** SQL, DBMS, Python, REST API integration
- **Tools and Version Control:** Git, GitHub, Chrome DevTools, Visual Studio Code
- **Methodologies:** Agile, Scrum, website testing, performance optimization, cross-functional collaboration
- **Currently Learning:** Bootstrap, jQuery, PHP, MySQL, WordPress

PROFESSIONAL EXPERIENCE

Product Management Intern, Bosscoder School of Technology | Aug 2026 - Oct 2026

- Worked with designers and developers on product discovery and feature planning, translating concepts into clear requirements the development team implemented.

Python Developer Intern, Cognifyz Technology | Mar 2026 - Apr 2026

- Developed a data visualization tool using Plotly and Matplotlib that converted raw datasets into interactive, presentation-ready charts.
- Built a web scraping tool with BeautifulSoup that parsed live HTML and XML from production websites, handling malformed and inconsistent markup.
- Automated a repetitive data processing workflow in Python, reducing manual effort on a recurring task.

Business Analysis Intern, Litz Internship | Apr 2025 - May 2025

- Analyzed 12 months of CRM, product usage and support data to explain a 22 percent annual customer churn rate and identify four key drivers.
- Built a predictive churn model with 85 percent accuracy and 0.89 AUC to flag at-risk accounts and delivered retention recommendations projected to protect approximately 1.2 million USD in annual recurring revenue.

PROJECTS

AQI Monitoring Web Application | React, JavaScript, CSS, REST API

- Built a real-time air quality dashboard that fetches live data from a public REST API and renders current AQI, pollutant breakdown and historical trend charts.
- Implemented an automated alert component that flags readings above safe thresholds, with conditional styling driven by the AQI band.
- Designed a mobile-first responsive layout tested across Chrome, Firefox and Edge, and handled loading and error states so the interface degrades gracefully on API failure.

Machine Learning Classification Projects | Python, NLP, CNN

- Built email spam and phishing detection, arrhythmia detection and leaf venation classification models across text, signal and image data.

CERTIFICATIONS

Agile Scrum in Practice, Infosys | Principles of Generative AI, Infosys | AI Primer, Infosys

LEADERSHIP AND ACTIVITIES

Interschool Debate: Winner and Best Speaker | School Head Girl, 2022 to 2023 | Vice Secretary, Student Rotary Club, Coonoor, 2021 to 2023 | Coordinated over 100 volunteers on an NGO rural employment initiative.
